

MAGNA-FLO

FIBREGLASS SAND FILTERS

Magna-Flo sand filters have been designed for the Australian market. They are manufactured by long-lasting and non-corrosive fiberglass and resin, with bobbin wound automatic technology and UV resistance composites. This allows the filter to work and resist extreme weather conditions, with no corrosion and long working life. The unique construction system along with the highly engineered design make a filter that will out perform and outlast all others. The unrivaled design allows the production of a filter that is ageless in maintaining high performance, while extremely robust and reliable.

Application include swimming pools, marine parks, aquaculture, drinking water and industrial water treatment.

STYLISH:

A new style of filters with a 'glassy' and 'shiny' gel coat finish.

ROBUST:

Chemically resistant fibreglass construction allows installation in the harshest environmental conditions.

TOP PERFORMANCE:

Balanced internal hydraulic design maintains an even flow through the media bed producing maximum filtration performance.

LOW MAINTENANCE:

Large capacity media bed and manual multiport valve assembly increases filter cycles, reduces maintenance time, and ensures you of trouble free operation for many years.

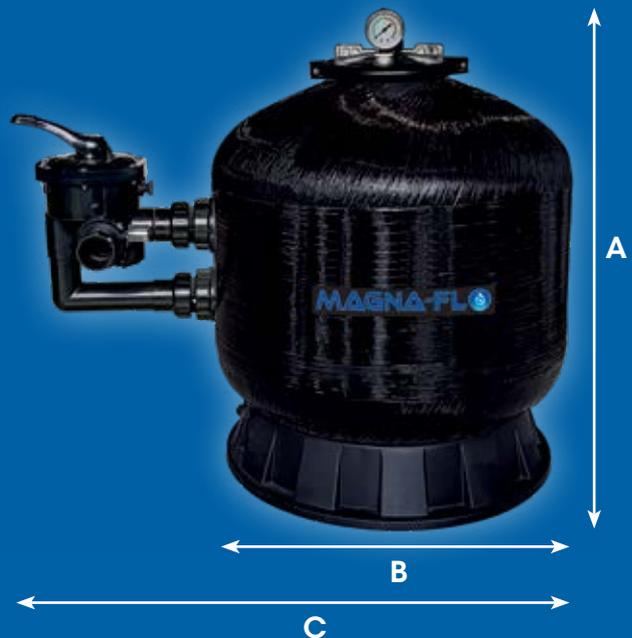

GUARANTEED TO LAST:

Our selection of superior construction materials and robust design allows you to enjoy a 10 year conditional warranty on the filter tank.
